

You plant the garden Liberty provides the water

Liberty offers many great ways to **conserve water** and help the environment. Here are just a few of our **water saving tips**:

Irrigation systems should always be inspected each spring and fall for potential leaks or damage from the winter and summer seasons.

Broken plumbing fixtures can contribute to high water usage. You can save more water and help keep your bill low by identifying and repairing broken fixtures as soon as possible.

Only run the dishwasher with a full load. Running the dishwasher multiple times for smaller loads will cause you to use twice as much water. Dishwashers also use less water per load than it would require for you to wash them by hand.
